## CONTENTS

TABLE	PAGE
1. Population by color: North Carolina and each county, showing incorporated places of 2,500 population and over, April 1, 1950.....	12
2. Population by age and sex showing color distribution: North Carolina, urban and rural, 1950.....	14
3. Birth-Registration Test by race and person in attendance: North Carolina, each county, and each city having a population of 10,000 or more, 1940 and 1950.....	16
4. Live births and deaths with crude rates per 1,000 population, also infant and maternal deaths with rates per 1,000 live births: North Carolina, 1914-1950 .....	19
5. Live births by color with crude rates per 1,000 population, by person in attendance: North Carolina and each county, 1950.....	20
6. Live births by color with crude rates per 1,000 population, by person in attendance: each incorporated place having a population of 10,000 or more, 1950.....	25
7. Resident live births by color and sex, showing month of birth: North Carolina, 1950.....	27
8. Resident live births by color and age of mother, showing birth order: North Carolina, 1950.....	28
9. Resident cases of plural births classified by number of children born alive and stillborn, and by color, sex: North Carolina, 1950.....	29
10. Resident live births by age of mother, by age of father: North Carolina, 1950 .....	30
11. Resident live births and deaths filed in 1950 showing number received in time to be included in 1949 or 1950 annual reports: North Carolina and each county.....	32
12. Resident deaths from each cause by age, color, and sex: North Carolina, 1950 .....	36
13. Deaths (excluding stillbirths) by color with crude rates per 1,000 population: North Carolina and each county, 1950.....	84
14. Deaths (excluding stillbirths) by color with crude rates per 1,000 population: each incorporated place having a population of 10,000 or more, 1950.....	87
15. Resident deaths (excluding stillbirths) by cause (abbreviated list of 52 causes), by color: North Carolina and each county, 1950.....	88
16. Resident deaths (excluding stillbirths) by cause (abbreviated list of 52 causes), by color: each incorporated place having a population of 10,000 or more, 1950.....	106

# CONTENTS—Continued

TABLE	PAGE
17. Deaths (excluding stillbirths) from selected causes: North Carolina, 1916-1950 .....	112
18. Leading causes of resident deaths (excluding stillbirths) by age, color, and sex: North Carolina, two-year average, 1949 and 1950.....	116
19. Leading causes of accidental deaths by place of occurrence: North Carolina, each county, and each incorporated place having a population of 10,000 or more, 1950.....	120
20. Causes of accidental deaths in State with crude rates per 100,000 population, by color and sex: North Carolina, 1950.....	126
21. Resident infant deaths by cause and age: North Carolina, 1950.....	127
22. Resident infant and maternal deaths with rates per 1,000 live births: North Carolina and each county, 1950 and five-year average, 1946-1950	129
23. Resident live births, illegitimates, stillbirths, deaths, infant deaths, and maternal deaths by color (Indians included in "other") with number occurring in hospitals: North Carolina and each county, urban and rural, 1950.....	132
24. Resident live births, illegitimates, stillbirths, deaths, infant deaths, and maternal deaths of Indians with number occurring in hospitals: North Carolina and each county, urban and rural, 1950.....	144
25. Resident live births and deaths (excluding stillbirths) by color and institution of occurrence: North Carolina and each county, 1950.....	145
26. Resident stillbirths by color and sex with rates per 1,000 live births: North Carolina and each county, 1950.....	150
27. Resident stillbirths by color and sex with rates per 1,000 live births: each incorporated place having a population of 10,000 or more, 1950....	153
28. Resident stillbirths by age, color, and attendant with percentage distribution: North Carolina, 1950.....	154

## LETTER OF TRANSMITTAL

Raleigh, North Carolina

April 14, 1952

The Honorable W. Kerr Scott  
Governor of North Carolina  
Raleigh, North Carolina

Dear Governor Scott:

I have the honor of transmitting the report for the Public Health Statistics Section of the Epidemiology Division, State Board of Health, covering the calendar year 1950.

Respectfully submitted,

J. W. R. NORTON, M. D.

*Secretary and State Health Officer*

## INTRODUCTION

The thirty-fifth annual report, Part II, of the Public Health Statistics Section, formerly known as the Bureau of Vital Statistics, presents tabular information regarding North Carolina's population, births, deaths, and stillbirths. The majority of the tabulations are by place of residence; selected tabulations, in whole or in part, are given by place of occurrence. Communicable disease morbidity data are shown in Part I of the annual report of the section which is printed separately.

The first annual report appeared in 1914. Subsequent reports have been published annually since that time with the exception of the years 1918 and 1919.

Certificates of births, deaths, and stillbirths occurring in 1950 that were filed in 1950 and the first three months of 1951 are included in this report. It is estimated that vital events occurring in 1950 but reported after the first three months of 1951 will comprise less than two per cent of the total 1950 events. There are strong indications that registration in the state has been improving in recent years. The certificates are more complete and accurate and on the average have been filed more promptly.

In 1950, a tabulation was made of all birth and death certificates filed in 1950 by year of occurrence. This was done in an effort to determine the per cent of certificates filed in time to be included in an annual report as compared with those filed too late to be included. The results of the tabulation are shown in Table 11 of this report. This tabulation was prepared by county of residence in order to make available a correction factor that could be used by each county to more accurately calculate the natality and mortality rates, instead of the rates derived from the published figures.

For example, Wayne County, with a population of 64,267, had 1,647 live births in 1950. The crude birth rate per 1,000 population was 25.6. However, by referring to Table 11, page 32 of this report, it may be seen that while 1,647 resident live birth certificates were received in 1950 for Wayne County, only 1,527 of these or 92.7% represented vital events for 1949 or 1950 which were received in time to be included in either the 1949 or the 1950 annual report. Therefore, the conventional crude rate of 25.6 per 1,000 population is understated by 7.3%. By dividing the conventional rate, 25.6 by 92.7%, the per cent on

time, and multiplying by 100, a more accurate crude rate of 28.4 instead of 25.6 is obtained. Similar corrections can be made for all other counties, both for births and deaths.

### *Birth-Registration Test*

At the time the 1950 Census of North Carolina's population was taken, the census enumerators prepared a special infant card for each child born during the period, January 1—March 31, 1950 and who was still alive April 1, 1950. These cards were then matched against birth certificates on file in the state office to determine the percentage of children born during the period who had a certificate registered in the state office no later than December 31, 1950.

The preliminary results indicated that 96.1% of the certificates were on file. This compares very favorably with the results of a similar test conducted in 1940. At that time, only 86.1% of the certificates were on file. The preliminary results are published in Table 3, page 16 by color and attendant.

When the data from Table 11 are compared with those in Table 3, it is apparent in most instances that those counties with a large percentage of their certificates on time had a correspondingly high per cent of certificates on file. In other words, there is a positive correlation between these two factors in birth registration. For example, New Hanover filed 99.8% of their birth certificates in time to be included in an annual report. The Birth Registration Test indicated that 99.3% of their certificates were registered during the test period—both results are very good, comparatively.

### *Population*

The population data in this report are furnished by the U. S. Census Bureau and are as of April 1, 1950. The rates for 1950 are based on the population as enumerated and no attempt was made to estimate the population as of July 1, 1950 since it was felt that most users would prefer the census count to estimates.

The population of North Carolina as of April 1, 1950 was 4,061,929. This total represents a population gain of 490,306 people (13.7% increase) over the 1940 total of 3,571,623.

### *Natality*

In 1950, there were 104,958 live births occurring to mothers who were residents of the state. All births were allocated to the place of residence of the mother regardless of the place of birth

or the length of residence. Births occurring in hospitals, sanatoria, and all other institutions, were allocated to the place where the mother lived. Births occurring on military bases to military personnel were allocated according to the residence shown on the certificate. The crude birth rate was 25.8 births per 1,000 population. There were 69,394 white births and 35,564 nonwhite births. For the fifth consecutive year, over 100,000 births were recorded.

This state defines a stillbirth as a fetus showing no evidence of life after complete birth if the twentieth week of gestation has been reached. There were 2,540 resident stillbirths reported resulting in a rate of 24.2 stillbirths per 1,000 live births. If stillbirths were considered as a single cause of death, they would rank fourth between cancer and nonmotor vehicle accidents as a leading cause of death.

### *Mortality*

There were 30,796 resident deaths recorded in 1950. The crude death rate was 7.6 deaths per 1,000 population. Diseases of the heart, as they have for the last 30 years, were responsible for more deaths than any other cause, accounting for approximately one-third of all deaths for the year.

All mortality statistics shown by cause in this report are classified according to the Sixth Decennial Revision of the International Lists of Diseases and Causes of Death. This is the second year that this revised statistical code has been applied to the causes of death; therefore, some attention must be given to the effects of the revision on certain causes of death before comparison with previous years can be made accurately.

The most important feature of this revised classification procedure is the emphasis that is placed on the underlying cause of death, as determined by the attending physician. The physician's statement is used as the determining factor when two or more causes of death are entered. For the decade 1939-1948, the selection of the cause of death for tabulation was made according to joint-cause rules which established priority of cause on certain factors rather than on the physician's opinion.

In Table 17, regarding deaths from selected causes, 1916-1950, it is necessary to take into consideration the effect of the revision of the International List and of the joint cause of death coding procedure. A comparability ratio is shown which is cal-

culated from the approximate change that has taken place due to coding revisions between 1949, 1950 and prior years, 1939-1948. This ratio was obtained by classifying deaths according to the Fifth Revision of the International Code as well as by the Sixth Revision and then basing the ratio on the changes derived.

### *Hospital Data*

All tables in this report which reflect events occurring in hospitals are based on the general and allied hospital definition of the N. C. Medical Care Commission. A hospital is defined as a place where two or more nonrelated individuals reside 24 hours or more on the premises and receive medical care over and above any domiciliary care.

### *Infant and Maternal Mortality*

There were 3,632 infant deaths and 123 maternal deaths reported. The resultant infant and maternal deaths per 1,000 live births were 34.6 and 1.2, respectively. The infant mortality rate was the lowest on record. The maternal mortality rate was identical with that for 1949 which was lower than for any previous year. The actual number of infant and maternal deaths also represent a new low dating back to 1914.

In 1918, there was an all-time high rate of 101.8 infant deaths per 1,000 live births. The previous high year for maternal deaths was also in 1918 when there were 10.8 maternal deaths per 1,000 live births. The infant mortality rate was three times as high thirty-one years ago as it was in 1950 while the maternal rate was nine times as high at that time.

### *Rates*

All rates shown in this report are crude rates unless otherwise specified. Such rates have not been adjusted for differences in the age, sex, color, rural or urban distribution of the population, or for under-registration or late reporting. Such factor should be kept in mind when comparing two different areas or time periods.

### *Changes in This Report*

Each year, this office is asked for varying types of vital statistics information which indicates the necessity for preparing additional tabulations. Every effort has been made to include

those tabulations with data most frequently requested. In most cases, information given in a previous annual report but not included in this report, may be obtained by request.

Tables, new or revised, appearing in this report are as follows:

Table 1.—Population by color: North Carolina and each county, showing incorporated places of 2,500 population and over, April 1, 1950

Table 2.—Population by age and sex showing color distribution: North Carolina, urban and rural, 1950

Table 3.—Birth-Registration Test by race and person in attendance: North Carolina, each county, and each city having a population of 10,000 or more, 1940 and 1950

Table 4.—Live births and deaths with crude rates per 1,000 population, also infant and maternal deaths with rates per 1,000 live births: North Carolina, 1914-1950

Table 11.—Resident live births and deaths filed in 1950 showing number received in time to be included in 1949 or 1950 annual reports: North Carolina and each county

TABLE 1.—POPULATION BY COLOR: NORTH CAROLINA AND EACH COUNTY, SHOWING INCORPORATED PLACES OF 2,500 POPULATION AND OVER, APRIL 1, 1950

<sup>1</sup>Previous births used for calculation of birth order include stillbirths. For example, the white mother in the 15-19 age group who had her ninth child in 1950 had two stillbirths—thus the live birth was the ninth birth experience.

<sup>2</sup>No mother reported as having delivered a 25th child.

TABLE 9.—RESIDENT CASES OF PLURAL BIRTHS CLASSIFIED BY NUMBER OF CHILDREN BORN ALIVE AND STILLBORN, AND BY COLOR, SEX: NORTH CAROLINA, 1950

Sex and Status at Birth	Cases of Twins		
	Total	White	Other
Number cases of twins.....	1,171	668	503
Two males—total cases.....	422	243	179
Both children live born.....	366	222	144
One child live born, one stillborn.....	36	10	26
Both children stillborn.....	20	11	9
One male, one female—total cases.....	360	177	183
Both children live born.....	323	166	157
One live born, one stillborn.....	28	10	18
Both children stillborn.....	9	1	8
Two females—total cases.....	389	248	141
Both children live born.....	351	231	120
One child live born, one stillborn.....	20	9	11
Both children stillborn.....	18	8	10
Sex and Status at Birth	Cases of Triplets		
	Total	White	Other
Number cases of triplets.....	7	2	5
Two males, one female—total cases.....	1	-----	1
All three children live born.....	1	-----	1
One male, two females—total cases.....	2	1	1
All three children live born.....	2	1	1
Three females—total cases.....	4	1	3
All three children live born.....	4	1	3

\* 1916-1948 data from NOVS reports; 1949 and 1950 from N. C. reports. Data by place of occurrence, 1916-1938; by place of residence, 1939-1950.

\*\* Includes all accidents except motor vehicle; legal executions included 1916-1929.

\*\*\* The international code of the causes-of-death was revised as of 1949 and requires slightly different groupings of deaths than the previous international code; therefore, the 1949, 1950 death totals are not comparable with previous years for all categories. The 1949, 1950 totals can be converted to totals comparable with previous years by dividing the 1949, 1950 deaths in each category by the ratio shown for that category.
